

Dear Kohler Partner,

The State of California's new water conservation standards restricting water usage for showering products to 1.8 gpm took effect on July 1, 2018, and we are excited to support the preservation of our precious natural resources. We have a long, proud history as passionate stewards of the environment, and we applaud California for taking this positive step toward more responsible management of our precious natural resources.

We want to assure you that Kohler has already incorporated this change into our product offering. We are taking steps to ensure a seamless transition to the new flow regulation and will continue to introduce products to meet these standards. We stand ready to provide you with a great variety of plumbing products that are fully compliant under this new regulation, all with the remarkable beauty, exceptional performance and reliability you have come to expect from Kohler.

Please note that these newly compliant products will feature exteriors that are exactly the same as their predecessors but will be identified by new SKU numbers to differentiate them from versions sold in other states with different standards.

We greatly value you as a partner, and you can count on us to provide you with high-performance products, valuable tools and our faithful support as you grow your business. Thank you for being part of our Kohler family.

Please click on the buttons below to see a full list of Kohler products that are California compliant.
